

Project Report for Book Store Management Application

-IMT2019048

1. Use Case diagram

2. UML diagram

3. OR Mapping

book :-

Name of column	Data Type	Constraints
book_id	Number	PK
bname	String	NOT NULL
author	String	
genre	String	

customer :-

Name of column	Data Type	Constraints
cname	Number	NOT NULL
aadhar_um	String	PK
address	String	
sex	Character	

lend_info :-

Name of column	Data Type	Constraints
book_id	Number	PK, FK references book.book_id
customer_id	String	FK references customer.aadhar_num, NOT NULL

4. Output Screenshots

- Tables with some sample data

```
mysql> select * from book;
```

book_id	bname	author	genre
1	Book1	Author3	Genre1
4	Book2	Author2	Genre2
5	Book5	Author5	Genre5
6	Book38	Author35	Genre15
7	Book76	Author50	Genre12

```
5 rows in set (0.00 sec)
```

```
mysql> select * from customer;
```

cname	aadhar_num	address	sex
Cust01	123456789012	Address01	M
Cust2	234567890123	Address2	F
Cust45	678901234567	Address45	M

```
3 rows in set (0.00 sec)
```

```
mysql> select * from lend_info;
```

book_id	customer_id
1	123456789012
7	123456789012

```
2 rows in set (0.00 sec)
```

- Menu

```
Connecting to database...
1. Add book
2. Add customer
3. Search all books
4. Search available books
5. Search customer
6. Lend book
7. Return book
8. Search Lend Records
9. Update book details
10. Update Customer details
11. Delete Book
12. Delete Customer
0. Quit
```

- Add, read, update, delete for book

- Add

```
1
Give the book name :
BookTest
Give the book author :
Author_test
Give the book genre :
Genre_test
```

```

1. Search By name
2. Search By aadhar id
1
Give the customer name : (Leave empty to display all customers)

Name: Cust_test, Aadhar: 111122223333, Address: Address_test, Sex: M
Name: Cust01, Aadhar: 123456789012, Address: Address01, Sex: M
Name: Cust2, Aadhar: 234567890123, Address: Address2, Sex: F
Name: Cust45, Aadhar: 678901234567, Address: Address45, Sex: M
```

- Delete

```
12
Aadhar for the customer to be deleted :
111122223333
```

```
5
1. Search By name
2. Search By aadhar id
1
Give the customer name : (Leave empty to display all customers)

Name: Cust01, Aadhar: 123456789012, Address: Address01, Sex: M
Name: Cust2, Aadhar: 234567890123, Address: Address2, Sex: F
Name: Cust45, Aadhar: 678901234567, Address: Address45, Sex: M
```

- Lending a book and returning a book
 - Lending a book

```
6
Give the customer aadhar number :
234567890123
Give the book id:
4
```

```
8
Give the book id : (Leave empty to display all records)

Book Id: 1, Customer Id: 123456789012, Book Name: Book1, Customer Name: Cust01
Book Id: 7, Customer Id: 123456789012, Book Name: Book76, Customer Name: Cust01
Book Id: 4, Customer Id: 234567890123, Book Name: Book2, Customer Name: Cust2
```

- Returning a book

```
7
Id for the book to be returned :
4
Aadhar of the returnee :
234567890123
```

```
8
Give the book id : (Leave empty to display all records)

Book Id: 1, Customer Id: 123456789012, Book Name: Book1, Customer Name: Cust01
Book Id: 7, Customer Id: 123456789012, Book Name: Book76, Customer Name: Cust01
```

5. Notes and Instructions to run the code

1. Start the mysql server.
2. Execute the bookStore_create.sql script using the command : source bookStore_create.sql, in mysql command line.
3. Run the java program using the command : java -cp mysql-connector-java-8.0.18.jar MainProj.java .
